Objective

An Aspiring software developer with proficiency in web technologies, data structures and algorithms, and programming languages like C, C++, Python, Java. Eager to apply technical skills to real-world challenges, contribute to innovative tech projects, and grow within a dynamic company.

Education

B.Tech in Computer Science and Engineering <i>Gayatri Vidya Parishad College of Engineering Autonomous</i>	2022 – Present
Intermediate in MPC <i>Sri Chaitanya Junior College</i>	2020 – 2022
Secondary School Certificate <i>Chalapathi E.M School</i>	2011 - 2020

Skills

- Languages – C, C++, Python, Java, SQL
 - Frontend – HTML, CSS, JavaScript, React.js
 - Backend – Node.js, Express
 - Database – MongoDB, PostgreSQL
 - Data Structures and Algorithms
-

Internship Experience

Web Development Intern – <i>CodeClause</i>	May 2024 – June 2024
• Developed and optimized responsive web designs with HTML, CSS, JavaScript.	

Projects

Interactive Learning Path Builder | [Demo Link](#) | [Github Link](#)

- The Interactive Learning Path Builder enables users to explore, follow, and create custom learning paths with trackable progress and certification. Users can sign up as learners, and roles can be managed by admins (creator, learner, admin). Each path contains videos, articles, or quizzes, with resource-level completion tracking.
- Built with React.js, Node.js, and PostgreSQL, and deployed using Netlify (frontend) and Render (backend & DB). The app is fully Dockerized for local development with Docker Compose.

Zomato Restaurant Listing and Searching | [Demo Link](#) | [Github Link](#)

- The Zomato Restaurant Listing & Searching Application allows users to explore restaurants based on location, and search preferences, featuring text and image-based search.
- Built using React.js, Node.js, and MongoDB, it provides a user-friendly interface with restaurant listings, detailed views for an enhanced experience.

To-Do List Application | [Demo Link](#) | [Github Link](#)

- Built an intuitive to-do list app using HTML, CSS, and JavaScript.
- Features real-time task updates, persistent storage via local storage, and task management functionalities. Built using HTML, CSS, and JavaScript, the application provides a clean and responsive interface where users can easily search for weather information.

Resume Builder | [Github Link](#)

- The Resume Builder allows users to input personal details, skills, education, and experience through a user-friendly interface.
 - Built using HTML, CSS, and JavaScript, the application enables users to download or export their completed resume.
-

Certifications

- Frontend Web Developer Certification : Completed and certified by Infosys Springboard for successfully learning and applying key frontend development concepts.
- The Joy of Computing Using Python : Certified by NPTEL with a 90% score and ranked among the top 5% of participants.
